Category:Spreadsheet software I first saw the film version of Fiddler on the Roof in 1986, when I was 12 years old, and the images of Tevye the Dairyman dancing on stage with his two daughters and his three sons, all inspired by the Fiddler himself, Levi Yitzchak Horowitz, were so moving that my father had tears in his eyes. I wasn't religious, but the father-daughter bond in the film moved me deeply. The musical has been revived every few years, most recently in 2013, and now it is receiving a fresh staging by British director Mark Morris, who received plaudits for his previous production in 2004, which starred Christian Borle, Elaine Paige and Lilli Cooper, and which ran for more than 800 performances. The story is about Tevye the Dairyman, who is constantly plagued by bad luck and the financial worry of providing for his family. He gets a lucky break when he is offered the job of the local Avramov-Fradinovich (teacher) of a Jewish school, and his job is to take over at Passover. While the only residents of the village are his wife and three children, his dalliance with the dairy maid, Golde, breaks his eldest daughter's heart, leading to a 1d647c40b

Osteoporosis is a major health problem among older women. As older Chinese women have higher osteoporosis-related fracture rates than older white women, these women may be at risk of osteoporosis and its complications. This study was designed to evaluate the attitudes and knowledge of osteoporosis in Chinese older women. A questionnaire was developed and self-administered to 1394 participants. Of the 1284 valid questionnaires returned, a 70% response rate (n = 909) was obtained. A total of 69.4% of respondents believed that osteoporosis is preventable, and 62.9% believed that exercise can prevent osteoporosis. Although most respondents (79.1%) were aware of osteoporosis, 30% believed that their bone density was normal. Only 5% of the respondents used any bone densitometry test and 14.4% had fractures. Respondents with a high level of education (P = 0.018) and middle/high income (P = 0.003) were more likely to have been tested for bone density. Respondents who lived in urban areas (P = 0.051) were more likely to use bone densitometry test. Osteoporosis is a major health problem among older Chinese women. Only half of the respondents were aware of osteoporosis. Despite this, 30% of the respondents believed that their bone density was normal. More education may be needed to increase osteoporosis knowledge in older Chinese women. Assessment of a flow-through chromatography-
