Other applications supported by AutoCAD include: History View – provides a history for commands, menu entries, and keystrokes. When an action is performed that creates a change that cannot be undone, the user can select the appropriate undo option from the history list. Workbenches – is used to prepare a drawing for fabrication, inspection, manufacture, etc. A workbench is one of the primary tools in the drafting process. There are a number of components in the workbench environment. They include: Drawings – are the primary means of communication. They are typically composed of one or more images, layers, and attributes. A drawing represents a piece of the overall project which is a visual description of the product that will be manufactured. This description can be presented in an image format such as the Windows bitmap (.bmp), Portable Network Graphics (.png), JPEG or the Windows image file format (.jpg). There are a number of special image formats in the.dwg file. The.dwg file is the most common type of image file used. It is text and image based. It consists of two parts: the header, which contains meta-information; and the drawing content, which is the data to be stored and exchanged. Drafting Symbols – represent the various materials, parts, and shapes found in the drawing. Utilities – provide functionality for creating drawings, gathering data, and other actions. Dimensions – represent a physical length or width measurement. Layouts – are used to create plans or maps. Views – are the windowing environment used to display, edit, and organize the drawing. There are many types of views including: Master views – used to present multiple views on a single page Sheet views – used to display multiple views on a single page or windows Zoom views – used to change the display to a smaller scale Group views – used to keep related views together Page views – used to present multiple pages on a single window Diagrams – show the relationships between components. Composition views – allow you to view the drawing in a unique way Modify tabs – allows the creation of a new drawing by modifying an existing one Structure View – represents a 3D view of the drawing. What's New in the AutoCAD?

Compare two CAD drawings on the same page. One CAD drawing is updated with new marks, tools and geometric entities, and the other is not. AutoCAD shows the differences and lets you decide whether you want to update the drawing with the most recent changes or leave the drawing unchanged. (video: 1:30 min.) View the changes that have been made to a drawing in an alternative mode, and use the dynamic help pop-up to guide you through the changes. Support for a basic markup language. You can send and receive markup files from other users, and you can use the AutoCAD App to access them in more than one drawing. The Decorator: Attach a graphic to a line, spline or shape. The graphic you attach is always the same size as the line, spline or shape. Join graphic symbols. Insert the reflection of a symbol along the surface of a line or spline. Use arrowheads or crosshairs as markers. Adjust the exact placement of arrows, crosshairs, and markers. Reverse the direction of all arrows and crosshairs. Get accurate visual feedback on the placement of decorations. Create a stencil. Create a drawing by drawing outlines on a top view of your scene, then decorate that drawing. Comprehensive support for the basic CAD markup language. Support for a list of active decorators for symbols that have been used. Show the number of times a graphic has been used. Switch the view mode to display the decorator panel on the side of a line or spline. Reverse the view so that the decorator panel appears on the bottom of the line or spline. Assign a unique ID to a decorator. Stick a decorator to any selected edge. Toggle the decorator panel display on or off. Generate arrows and crosshairs in all drawing views (not just in the current view). Generate only a single type of arrow or crosshair, such as arrowheads or halos. Choose the exact type of arrow or crosshair, such as whether to use rounded, angular, square, or no arrow or crosshair. Set the size of an arrow or crosshair
